Análisis del consumo eléctrico del submetering
Pareto de consumo del submetering

En este apartado aparece los consumos mensuales del submetering ordenados de mayor a menor. En primer lugar aparece la gráfica y después la tabla con los valores que en ella se representan.

En el pareto hay una serie de medidas que son cálculos:

- F1 Enfriadoras: suma de las cinco enfriadoras de la fase 1, excepto la enfriadora de Equipo Técnico que es una medida independiente.
- F1 Plantas Red: de cada planta de la fase 1 se recogen dos medidas, la de Red y la de SAI. Este sensor es la suma de la medidas de Red de todas las plantas de la fase 1.
- F1 Plantas SAI: suma de las medidas de SAI de todas las plantas de la fase 1.
- F1 Consumo Resto: a la suma de los dos tranformadores de la fase 1 se le resta el submetering de esa misma fase.
- F1 UPS 1/2 Resto: a la suma de los dos Sistemas de Alimentación Ininterrumpida (SAI o UPS en inglés) del cuadro de la fase 1, se le resta el sensor F1 Plantas SAI (mencionado anteriormente).
- F2 Consumo Resto: es la diferencia entre la medida F2 General S2 (el consumo general de la fase 2) y todo el submetering de esa misma fase.
- F2 CS1 Resto: es la diferencia entre la medida F2 CS1 y la suma de las medidas: F2 CL11, F2 CL12, F2 CL15, F2 CL16 y F2 CL17.
- F2 Enfriadoras: suma de las dos enfriadoras de la fase 2.
- F2 Verticales Red: como en la fase 1, en la fase 2 se recogen las medidas de Red y SAI de cada planta. Este sensor mide la suma de las medidas de red de cada planta de la fase 2, excepto los sensores F2 CV2 CS Aparcamientos, F2 CV2 CS8 y F2 CV2 Gral Circuitos que son medidas independientes.
- F2 Verticales SAI: suma de las medidas de SAI de cada planta de la fase 2.

Pareto (kWh)

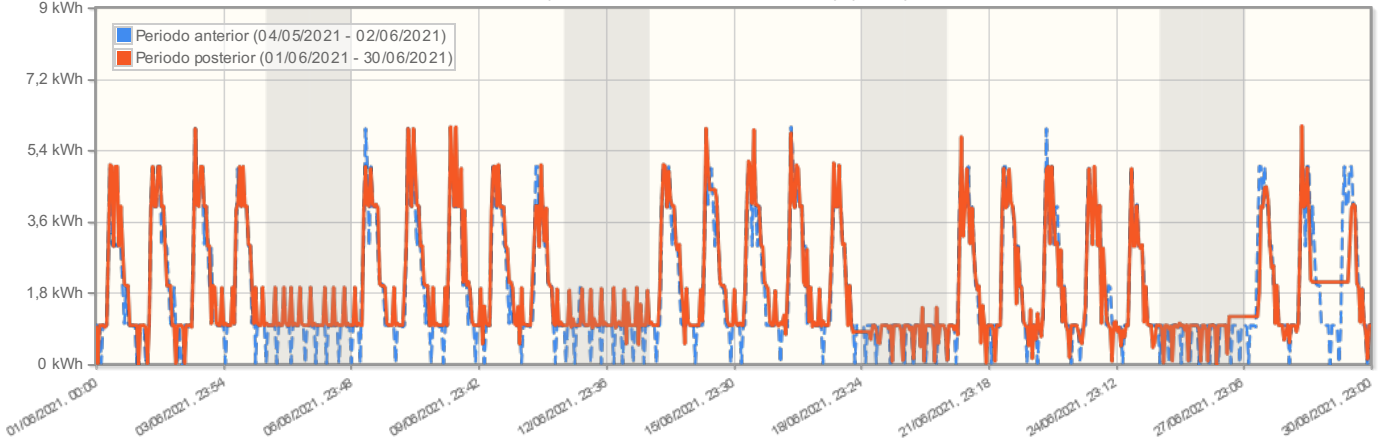

| Valores de Pareto | | |
|-------------------|---|----------------|
| Posición | Sensor | Valor |
| 1 | [Palacio Cibeles][1131] F2 Verticales red | 172.214,31 kWh |
| 2 | [Palacio Cibeles][1131] F1 Enfriadoras | 89.682,02 kWh |
| 3 | [Palacio Cibeles][1131] F1 Maq Cubierta A | 57.703,54 kWh |
